LaTeX software (the MiKTeX package) is available at www.miktex.org.

Course Prerequisites: MAP 2302 Differential Equations (solution methods for first order nonlinear and higher order linear equations)

Requirements and Assessment:

1. Each student must email Prof. Snider with the following data: Class "EML 6931"; Last name; First name. Thereafter each student is liable for all email notices concerning the class from Prof. Snider. If you wish to receive email at different mailboxes, send this message from each mailbox.

2. Each student must sign a copy of this syllabus as indicated below and submit it to Dr. Snider by the 6th Lecture.

3. Certain assigned problems may be identified as required homework. Other homework problems will be recommended to the students, but not graded.

4. A midterm exam will be given at a time to be determined, based on chapters 1-5. No makeup midterm exam will be given.

5. The final will be administered at a time to be determined. It is the student's responsibility to resolve any scheduling conflicts that arise due to external causes.

6. Completion of the email task, the syllabus signoff, and the required homework problems are necessary for the student to get a grade. If these tasks are fulfilled, the semester grade will be determined by the following procedures:

   a. A necessary and sufficient condition for a grade of A for the semester is a grade of A on the final.
   b. If the final exam grade is not an A, the semester grade will be a weighted average of the assigned problems, the midterm, and the final.

Academic Dishonesty - It is not acceptable to copy, plagiarize or otherwise make use of the work of others in completing homework, project, exam or other course assignments. The minimum penalty for doing so is an automatic zero on the assignment and an "F" in the course. If there are any questions regarding this policy they should be directed to the EE graduate program coordinator.
